

AI DISCOVERY LABS

Organisations are asking how AI can be meaningfully applied to their organisations. To help our customers answer this question, we developed our AI Discovery Labs. Designed with executives in mind, the AI Discovery Lab is a pathway of focused, working sessions. Each session builds upon the last to **upskill you and your teams** with a working knowledge of Agentic AI technologies, work through **how AI can be deployed in your context** and culminates in the **co-creation of an AI roadmap that is specifically designed to fit you** and your investment priorities.

Your AI Questions, Answered.

If you have ever asked any of the following questions, then we can help.

- What is Agentic AI?
- How is it different to other technologies?
- What are the risks or pitfalls that we should know about?
- How do we work safely with and govern AI technology?
- Are agents actually digital workers or just more software?
- Can I use agents to scale without a corresponding increase costs?
- How do I effectively assess and prioritise my opportunities?
- How should I start our AI journey when there's so much change & uncertainty?

Change your Capacity to Act.

We understand that AI technology promises to unlock substantial opportunities such as raising productivity, strengthening customer loyalty or simply reinforcing your unique competitive advantage. But we also recognise that it can also create uncertainty and ambiguity for you, your staff and your business model.

Nobody wants to make a costly mistake by picking the wrong technology, inadvertently increasing risk or simply failing to capture the opportunity by waiting too long on the sidelines.

To address this issue, we've developed a 4- step program, arranged in focused working sessions that gives you the opportunity to write your own AI journey; one that fits your business and with the support of technology practitioners who have decades of enterprise technology deployments under their belt.

Move Confidently in Uncertainty.

Our approach is deliberately different because it anticipates change.

A traditional consulting approach gathers large amounts of information from you to deliver an AI roadmap in return. Unfortunately, this deliverable quickly becomes out of date simply because AI technologies themselves are changing at pace and a static document cannot.

Our approach is focused on giving you the knowledge and the tools to **move confidently in uncertainty.**

This means you stay in control. You write the next chapter of your business journey by knowing how to read changes in the technology landscape and asking better questions of the technology solutions and partners that you choose to support you along the way.

Built to Deliver Value at Every Step.

We work with you to tailor each delivery program to fit your schedule and the complexity of your organization. We do recommend that adequate time is set aside during steps 2 and 3 to allow for creative thinking. An indicative time commitment is provided below to give you a sense of commitment required to get the best results.

	STEP 1: UNDERSTAND	STEP 2: DISCOVER	STEP 3: EVALUATE	STEP 4: ROADMAP
GOAL	Establish common baseline knowledge and language for AI.	Uncover the AI opportunities within your value chain	Identify the most valuable opportunities	Create specific action plan to start your AI journey
OUR WORK TOGETHER	- Understand your strategic ambitions, operating model, systems landscape and challenges. - Equip you with a working knowledge of AI technologies.	- Align on your AI goals and guardrails. - Co-create your assessment criteria. - Provide example use cases delivered by others to inspire you.	- Refine potential use cases. - Assess and prioritise use cases for ROI and feasibility. - Co-create a phased roadmap for your most valuable AI use cases.	- Describe the AI systems components you will need to underpin success. - Highlight key assumptions/ uncertainty areas and describe lead indicators to watch for going forward.
YOUR INPUT	Learn key AI concepts and test your knowledge by asking better questions.	Brainstorm/ research ideas and their potential impact on your business.	Ownership of co-developed roadmap and priority use cases.	Stress test the final roadmap and assumptions to confirm your understanding.
TIME	~4-8 hour session	~4 hour session plus brainstorming & research time	~1-2 day session	~4-6 hour session

Results that prepare you for tomorrow.

At the conclusion of the program, you will have the **knowledge to ask better questions** of your technology partners, an **understanding of the lead indicators** you should watch out for as you move forward and a **bespoke AI roadmap** to get you started on the journey.

Engage with Us!

Interested in capturing the AI opportunity for yourself? We look forward to engaging. Visit us at www.iqleveraged.com/contact.html and get in touch.

About IQ Leveraged

IQ Leveraged is built for the next generation of consulting. We have readily accepted the challenge of rethinking how professional services can and should be delivered to our customers in the age of AI and the growing democratisation of knowledge.

We provide end-to-end technology and AI services for the enterprise. Built from the ground up for the AI economy. Learn more at www.iqleveraged.com
